Summarize the 1906 San Francisco Earthquake. What factors shaped the current landscape?

The **1906 San Francisco Earthquake** was one of the most devastating natural disasters in U.S. history. It struck on **April 18, 1906**, with an estimated magnitude of **7.8** along the **San Andreas Fault**. The earthquake itself caused widespread structural damage, but the disaster was compounded by massive fires that broke out afterward, fueled by ruptured gas lines and wooden buildings. By some estimates, over **3,000 people died**, and more than **80% of the city** was destroyed. Tens of thousands were left homeless, and the city's economy and infrastructure were severely disrupted.

Several factors shaped the current landscape of San Francisco:

1. **Urban Reconstruction** – The rebuilding after the earthquake and fires led to more modernized architecture, stricter building codes, and better urban planning to resist future earthquakes. Many iconic neighborhoods and the downtown financial district were redesigned.
2. **Geographic Constraints** – The city's hilly terrain influenced how buildings were reconstructed, with attention to soil stability and slope reinforcement to mitigate landslides in future quakes.
3. **Economic Shifts** – The disaster accelerated investment in certain areas while displacing populations in others, reshaping the city's demographic and economic map.
4. **Infrastructure Modernization** – Utilities, roads, and public services were rebuilt with improved materials and designs to withstand seismic events, influencing the city's long-term urban infrastructure.
5. **Awareness of Seismic Risk** – The earthquake cemented San Francisco's place as a city acutely aware of earthquake hazards, influencing building regulations and disaster preparedness that continue to shape the city today.

In short, the 1906 earthquake and ensuing fires not only reshaped the physical landscape but also influenced urban planning, architecture, and the city's approach to natural disaster resilience—effects still visible in San Francisco over a century later.

If you want, I can also make a **visual map showing how the city was rebuilt after 1906**, highlighting the areas most affected and modernized. Do you want me to do that?
